Brake bleeder socket set

The ATE brake bleeder socket set, consisting of long and short sockets, is excellent for opening and closing all common bleed valves during brake fluid changes or when bleeding the brake system. The fine-toothed reversible ratchet allows for switching between opening and closing. The included silicone hose is guided through the ratchet and socket for brake fluid exchange and remains on the bleed valve during fluid exchange. The ergonomic reversible ratchet ensures comfortable and secure operation of the bleed valves without damaging them. The selection of short and long sockets often provides access to the bleed valves without having to remove the wheels.

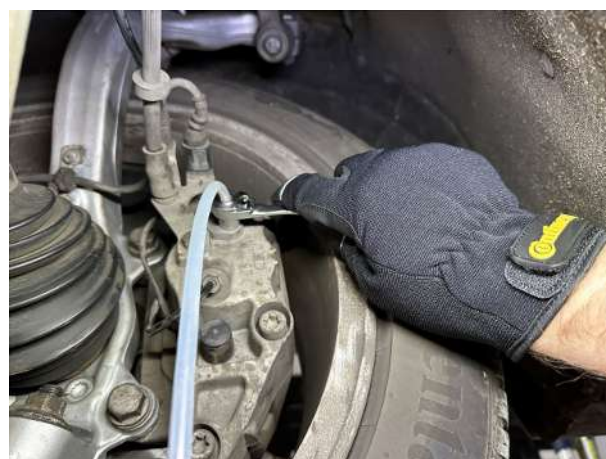

Benefits

- | Bleeding brake systems without removing the wheels
- | Ideal for bleeding brakes and clutch systems
- | Can be used in hard-to-reach areas
- | Fine-toothed, reversible ratchet makes loosening and tightening easier
- | 12 Hexagonal through sockets made of chrome vanadium, matt satin finish
- | Hose remains on the bleed valve when loosening/tightening
- | Long silicone hose

Shipment

- | Reversible ratchet matt satin finish made of chrome vanadium
- | 6 special socket inserts: SW 7 x 24 mm - 8 x 24 mm - 9 x 35 mm - 10 x 24 mm - 11 x 24 mm - 12 x 24 mm
- | 6 special socket inserts: SW 7 x 50 mm - 8 x 50 mm - 9 x 50 mm - 10 x 50 mm - 11 x 50 mm - 12 x 50 mm
- | Silicone hose Ø 4x7 mm, 750 mm long
